

Steve Burke, Head of Grounds at Aquinas College is an enthusiastic supporter of Soil Zyme. Prior to the use of Soil Zyme, this turf area under the trees was difficult to establish. By incorporating Soil Zyme into the establishment program, this previously difficult area has been covered with a strong sward.

At Aquinas College the incorporation of Soil Zyme into the maintenance program has helped to present the turf on the College's main playing field in a uniformly green and vigorous sward.
